

# FINALLY, AN EASIER WAY TO MAKE CONNECTIONS WITH YOUR FAVORITE COMPUTER.

The new Stelladaptor™ from AtariAge and Pixels Past allows you to sit back and enjoy all the fun, the exciting action, and all the challenge of your ATARI® Video Computer System™ from a new perspective, your favorite computer.

By using a very simple two port, plug-and-play USB device it's quick and easy to connect your ATARI VCS controllers (Joysticks, Paddles and Driving Controllers) to your computer's USB port. Instantly, you have the connections you need to bring one of the best home video game entertainment systems ever made into the modern age. Emulation has never been so realistic!

Stelladaptor is compatible with Macintosh, Windows and Linux operating systems, making it versatile enough to be enjoyed by nearly anyone with a computer. Setup is a snap, simply download the appropriate emulation software, attach your Stelladaptor from an ATARI joystick to your USB port and you're all set for the most realistic ATARI action ever experienced on a computer.

Let the Stelladaptor help bring back all your favorite memories by turning your computer into a perfect replica of the ATARI VCS.
