disobey

disobeyer

dis·o·bey | ,disə'bā |

verb [with object]

fail to obey (rules, a command, or someone in authority): *around 1,000 soldiers had disobeyed orders and surrendered.*

DERIVATIVES

disobeyer | ',disə'bāær | noun

ORIGIN

late Middle English: from Old French *desobeir*, based on Latin *oboedire* 'obey' (see [obey](#)).

FIGURE 17-2: PIC16LF627A/628A/648A VOLTAGE-FREQUENCY GRAPH, $-40^{\circ}\text{C} \leq T_A \leq +85^{\circ}\text{C}$

Note the following details of the code protection feature on Microchip devices:

- Microchip products meet the specification contained in their particular Microchip Data Sheet.
- Microchip believes that its family of products is one of the most secure families of its kind on the market today, when used in the intended manner and under normal conditions.
- There are dishonest and possibly illegal methods used to breach the code protection feature. All of these methods, to our knowledge, require using the Microchip products in a manner outside the operating specifications contained in Microchip's Data Sheets. Most likely, the person doing so is engaged in theft of intellectual property.
- Microchip is willing to work with the customer who is concerned about the integrity of their code.
- Neither Microchip nor any other semiconductor manufacturer can guarantee the security of their code. Code protection does not mean that we are guaranteeing the product as "unbreakable."

Code protection is constantly evolving. We at Microchip are committed to continuously improving the code protection features of our products. Attempts to break Microchip's code protection feature may be a violation of the Digital Millennium Copyright Act. If such acts allow unauthorized access to your software or other copyrighted work, you may have a right to sue for relief under that Act.

YIPL

FIGHT BACK! NO.13

SEPT.-OCT.'72

THE YOUTH INTERNATIONAL
PARTY LINE

READERS

Dear Yipl,
Please distribute this little gem of info immediately- "The National Security Agency monitors and records every trans-Atlantic telephone call." Source- Rampart's Aug. '72. Also- "Of course, all trans-Atlantic and trans-Pacific Telephone calls to or from the U.S. are tapped."

I don't know if the NSA would pass info on to the FBI about phone phreaks, but its certainly conceivable that they may.

It seems IIT is pushing Astrofood to school kids through a subsidiary, Continental Baking. I think we need to find out just how much IIT controls. If I get the time I'll go to MLP&Fs and check Standard & Poors to see if I can get the scope of operations of this giant. J.R., Atlanta, Ga.

Dear YIPL,
Just a note to give you a few comments on the August issue(No. 12).

First, the Red Box: you might note that it is also important to provide a contact and make the line connections which will ground the tip side of the line when you beep the box. When a coin is placed in a pay phone, the mechanism grounds the tip side for about 1 second; this is what gets you dial tone on a so-called pre-pay phone. Then, when dealing with the operator for longer calls, the beeps tell her that you've paid, but it will look a little funny if the equipment doesn't register the dropping of coins. Both are necessary for a realistic simulation.

(The terms "tip" and "ring"(also "sleeve") come from the old manual switchboard days and describe the connections on a cord plug. These archaic terms are still used today: the tip side is the green wire and L1 if things are hooked up properly; the ring side of the line is the red wire and L2.)

Second: I have constructed several Blue Boxes using the Signetics NE 566 IC. I do not recommend it for several reasons: 1. It is designed to be a voltage-controlled oscillator and is very good in this role. It is so damned voltage sensitive that it needs a very stable, rock solid battery supply. Even with a zener regulator after the battery, which is getting rather silly, it is no good because of 2. its temperature sensitivity. Using mylar caps and megal-film resistors I got an 8% variation between 35°F. and 90°F., which means you have to re-tune the thing all the time. Finally, diode variations lead to unreal differences between tones that should be the same frequency. Best Wishes, T.V., Calif.

Many telephone services at your fingertips simply require the correct number to perform for you. These New York numbers all work in areas of N.Y., and many out-of-city and out-of-state readers will find they work in their neighborhood. We'll publish Los Angeles and San Francisco numbers if we receive them soon.

AREA CODE 212
324-0707 Sweep tone at high level. When comparing an oscilloscope trace of this tone to another made at an earlier date, detection of taps is possible.
DE2

HY9 9932 Silent line-Line will be held open while Tw1 off hook without making noise.
XXX-9980 Dial your prefix(first 3 digits) and 9980 and you will get a 6000 cycle tone. It has a slight tendency toward being permanent, unless the phone hook is hit twice.
311

958 These numbers,when dialed, read back the number you are on. Great in apartment basements for finding your line, or unused free lines waiting to be connected.

660(wait for tone)09(wait)6(hang up)
660-your last 4 digits(wait)1(hang up) RING BACK
6606(wait)6(hang up)
Prefix-9901 Verification. Sound like Telco employee. or dial 0,ask for "260 official 0-1" and get the same without even paying a message unit. By the way, don't use 260, use your own prefix. When verifying operator comes on say,"Verify such and such please."

New Yorkers are up in arms against the Great Subway Ripoff. It seems people are buying the standard electrical knockout boxes at hardware stores, removing the knockouts, and then filing down the notch where it was attached. Then they proceed to use them as tokens in turnstiles. It turns out that they work in turnstiles almost anywhere in N.Y. Exceptions are Penn Station. If the knockout falls through the mechanism, they follow it with a real token and walk right through. The 40¢ boxes contain 17 knockouts, each worth 35¢ when filed a bit. YIPL readers are urged to watch out for these people, as they wipe their fingerprints off the slugs when they drop them.

Readers who missed the Phirst International PHONE PHREAK CONVENTION will be able to read about it in the latest issue of Ramparts Magazine, and in Telephony, the magazine of the telephone industry. The Telephony article, though somewhat biased, plugged our address for company execs, advising them not to reveal identities when writing us. Cute, huh? Now we've got AT&T's execs reading YIPL! However, we applaud Telephony on the ridiculous accuracy of their name, and salute their new readers with finger upheld!

HACKTIC

TIJDSCHRIFT VOOR
TECHNO-ANARCHISTEN

==Phrack Inc.==

Volume One, Issue 7, Phile 3 of 10

=====
The following was written shortly after my arrest...

\\The Conscience of a Hacker\\

by

+++The Mentor+++

Written on January 8, 1986

=====

Another one got caught today, it's all over the papers. "Teenager Arrested in Computer Crime Scandal", "Hacker Arrested after Bank Tampering"... Damn kids. They're all alike.

But did you, in your three-piece psychology and 1950's technobrain, ever take a look behind the eyes of the hacker? Did you ever wonder what made him tick, what forces shaped him, what may have molded him?

I am a hacker, enter my world...

Mine is a world that begins with school... I'm smarter than most of the other kids, this crap they teach us bores me...

Damn underachiever. They're all alike.

I'm in junior high or high school. I've listened to teachers explain for the fifteenth time how to reduce a fraction. I understand it. "No, Ms. Smith, I didn't show my work. I did it in my head..."

Damn kid. Probably copied it. They're all alike.

I made a discovery today. I found a computer. Wait a second, this is cool. It does what I want it to. If it makes a mistake, it's because I screwed it up. Not because it doesn't like me...

Or feels threatened by me...

Or thinks I'm a smart ass...

Or doesn't like teaching and shouldn't be here...

Damn kid. All he does is play games. They're all alike.

And then it happened... a door opened to a world... rushing through the phone line like heroin through an addict's veins, an electronic pulse is sent out, a refuge from the day-to-day incompetencies is sought... a board is found.

"This is it... this is where I belong..."

I know everyone here... even if I've never met them, never talked to them, may never hear from them again... I know you all...

Damn kid. Tying up the phone line again. They're all alike...

People who aren't hackers will enjoy the plot. People who are hackers will enjoy the message.

-Emmanuel Goldstein

It remains the most loyal compared to other movies recently released on the subject.

This page is brought to you by
**THEY'VE LIED ABOUT US... ARRESTED US...
AND OUTLAWED US.
BUT THEY CAN'T KEEP US OUT...
AND THEY CAN'T SHUT US DOWN.**

Nothing more, we're not out to become experts in hacking or forward your hacks to the FBI.

We're just looking for interesting scenarios to help us make money off of other people.

HACKERS

Hackers, the new action adventure movie from those idiots in Hollywood, takes you inside a world where there's no plot or creative thought, there's only boring rehashed ideas. Dade is a half-wit actor who's trying to fit into his new role. When a seriously righteous hacker uncovers MGM's plot to steal millions of dollars, Dade and his fellow "throwbacks of the 90s"...

The L0pht

What do a group of hackers do when the equipment they've accumulated over years of dumpster diving no longer fits in their apartments? They get a l0pht. Since 1993, a core group of seven Boston-based hackers have rented a loft space for hacking, trading information about cellular phone security, and building things like a wireless Internet service using discarded microwave equipment. All strictly for educational purposes, of course.

"It's a sort of hacker think tank" says Mudge (front), l0pht member and a familiar name to Apple II software crackers. Today, l0pht is stuffed with old PDPs, Sun Workstations, and even a small supercomputer.

Now that all of them have day jobs in the industry, why do they keep at it? "For the girls and the text files, of course," says Mudge. — *Steve G. Steinberg*

► income. Adding even more fuel to the trend, the cable-modem subscriber base is projected

The l0pht is happy to announce the availability of the **Black Crawling Systems Archives CD** for \$25 + S&H.;

This CD contains hard to find technical files and programs concerning subjects such as:

- cellular telephones, digital radio
- telephone systems, phreaking
- electronics projects/tools
- hacking, vulnerabilities, tools
- survival, patriot archives
- computer underground images and text files

The **L0pht Archives** offer hard to find files from the computer underground and beyond.

Internet **services** are available to enhance your privacy and information access.

Projects are always underway in our well equipped laboratories.

Relax and hang with the hackers.

Stuff from the l0pht that you can get your hands around.

Cons are as important as they are a good time.

Our security **advisories** are designed to inform you of current vulnerabilities. **Home of L0phtCrack Updated 08.29.97**

Mine our site for the nuggets you desire.

[stats Who is linking to the l0pht?](#)

4/11/97	Microsoft NT Passwords	L0phtCrack the Microsoft NT cracker	L0phtcrack will recover passwords from Windows NT registries in a variety of fashions, including exhaustive keyspace attacks.	mudge@l0pht.com weld@l0pht.com
Recently several NT password crackers have emerged. We offer this one with the belief that it offers some features and functionality that the current ones do not have.				
L0phtcrack will recover passwords from Windows NT registries in a variety of fashions.				
By feeding in the output from PWDump [by Jeremy Allison, jra@cygnus.com] and a dictionary file, L0phtcrack rev 1 will attempt to retrieve:				
1) only the LANMAN plaintext password				
2) only the NT Dialect MD4 plaintext password [see reasoning below]				
3) Both the LANMAN and MD4 plaintext passwords (by deriving the MD4 password from the LANMAN output and running through up to 2 to the Nth power permutations)				
Alternatively, L0phtcrack gives you the capability to <u>brute force</u> the entire key space and recover ALL USER PASSWORDS up to 14 characters in length.				
By going through the entire keyspace available, this program WILL RETURN ALL OF THE PLAINTEXT PASSWORDS (both LANMAN and MD4) up to and including 14 characters in length (note that the User Login Dialog box on NT machines limits the amount of characters that can be typed to 14 for the MD4 dialect. Future releases of this software will enable brute forcing of up to 16 characters for MD4).				
L0phtcrack comes in three flavours:				
1) A nice Windows GUI interface so you can point and click.				
2) A CLI version for running in "DOS" windows.				
3) Source code that is generic enough to build on most Un*x's.				
Full L0phtCrack information.				
Release	Application	Platforms	Severity	Author
3/19/97 UPDATED 3/24/97	IIS 3.0	Windows NT Server 4.0	Users view the contents of .asp files which could contain sensitive information such as passwords.	weld@l0pht.com
Microsofts IIS 3.0 supports server side scripting using "Active Server Pages" or .asp files. These files are meant to execute and not be visible to the user. These scripts may contain sensitive information such as SQL Server passwords. These files can be downloaded and viewed instead of executed by replacing '.' in a URL with a '%2e'.				
There is a hot-fix for this problem available from Microsoft Dated Thu Feb 27 14:22:00 1997 This problem only exists in sites without the hot-fix that attempted a fix using an ISAPI filter that failed to filter out '%2e' correctly.				
IIS 3.0 .asp Vulnerability.

1/14/97	Dynamically linked SUID programs calling getopt(3)	Solaris OS	Users can exploit a problem in Solaris SUID programs that use getopt(3) to obtain elevated priveledges.	mudge@l0pht.com
Scenario: A buffer overflow condition exists in the getopt routine. By supplying an invalid option and replacing argv[0] of a SUID program that uses the getopt(3) function with the appropriate address and machine code instructions, it is possible to overwrite the saved stack frame and upon return force the processor to execute user supplied instructions with elevated permissions.				
Solaris Libc Vulnerability.				
Release	Application	Platforms	Severity	Author
1/14/97		Filter Fresh Coffee Machines	Users can gain access using a factory default backdoor.	/dev/null@l0pht.com
Scenario: Suppose you don't work at Microsoft, Sun, or any of the companies that provide free hot caffinated beverages to their employees. It's a sad day when you find yourself at work (or scrounging around someone elses place of employment... I dunno, perhaps leaving a portable sniffing laptop up in the acoustic ceiling tiles) around 2am and the only coffee available is from a FILTER FRESH vending machine. It's even sadder when you are being asked to deposit .55 cents for an 8oz. cup of really poor java.				
How to scam coffee from FILTER FRESH coffee vending machines.				
Release	Application	Platforms	Severity	Author
1/10/97 updated 3/20/1997	Novell Netware 3.11 and lower / Netware 3.x	Novell Netware 3.11 and lower / Netware 3.x	Under Netware 3.11 and lower, users may create trojan horses by creating personal login scripts for users who do not already have one. Under all 3.x versions users may create or modify their own login scripts.	tan@l0pht.com
Scenario: Users without a personal login script are vulnerable to a trojan horse type attack. Any user logged into the server can create a personal login script for any user that does not already have one. A user may also create their own personal login script, circumventing any access control implemented through EXITing to menu systems or issuing commands from the personal login script. Under these scenarios, one user may use another to launch an elevated priveledges attack. Alternately, a user may EXIT from the login script, circumventing any menu systems typically used to restrict access at the presentation level. The vulnerability has been tested under Netware 3.x, is believed to exist in Netware 2.x (but is un-tested). Netware 4.x is planned to undergo examination.

PROTOTYPE THIS

6x6 ALL-TERRAIN RUNNER

In an island warehouse in the San Francisco Bay, a team of engineers and PhDs are inventing the future, one prototype at a time. This crack team takes on the problems of today's world by imagining the craziest, one-of-a-kind prototypes of tomorrow, and then builds them. Consisting of two PhDs, an electrical engineer and a special effects wizard, the *Prototype This* team takes you on a spectacular journey through the emerging technology of the future.
